COOLING TROUGH

The fixed or multipass cooling trough is made of stainless steel AISI316 and it is consisting of decanting tanks with two deviating pulleys with diameter 400/600/800mm. The pulleys are made in black Ertalon a special plastic material. The upper/lower sections are length 3mt each. The drying unit is composed from balls chain, air blower and a separate water aspirator with electric turbine. There is also a telescopic mobile part manually movable, allowing you to work easier around the crosshead of the extruder during cleaning.
