MULTI PAY OFF STATION MODEL CAN

The family of our pay-off systems is composed from these models:

- CAN630 for reels with max diameter 630mm
- CAN800 for reels with max diameter 800mm

The pay-off stations are required for assemble of telecommunication cables, data cables, single wires, pairs or quads.

We offer various types of pay-off groups with manual or automatic reel loading for reels of 630 to 800mm flange diameter.

The number of single stations is unlimited and depends on the final product to be assembled.

The standard braking system is mechanical and works with a friction belt and a mechanical spring for tension set-up.

For more sophisticated stations, we also provide regulated tension control systems with electromagnetic brake and tension measuring.

In case of wire-brake, detectors stop the line immediately.

Can be used a carriage carries hydraulic reel for loading and unloading of the reels

This machines is made up of independent modules that can be dismantled
