TALC APPLICATOR MODEL TAL

The talc applicator model TAL we have developed is of the longitudinal type where the will cable run through it. Composed of a talc chamber and a hopper, this machine is placed directly against the crosshead of the extruder. A mixing unit placed in the powder chamber will guarantee a continuous mixing of the powder and a constant film on the wires. Further along the machine, an endless screw will bring back to the mixing area the excess powder falling from the wire on its way to the crosshead. At each end of the chalk applicator an air wiper will gently blow back the powder trying to escape from around the cable, keeping your factory as clean as possible. The talc chamber is completely sealed to avoid any leak to the outside of the machine.

TECHNICAL DESCRIPTION

Maximum diameter of the cable (mm)	20
Maximum speed for a good result (m/min)	300
